Cloud Insights - Assessment and Migration Strategy Planning

Objective: This engagement is proposed to formulate an optimal cloud migration plan. A completed portfolio of applications, servers, and other resources with all relevant details are collected during the automated discovery process. This information is analysed to develop the order of migration, migration strategy, and application design.

Deliverables: Executive presentation and a migration strategy report covering:

1. Application dependency mapping
2. Move group plan - logically group dependent applications for migration and transformation with a defined timeline
3. Recommendations based on industry trends and current state assessment
4. Total cost of ownership
5. Application target state design
6. Application migration plan
7. Risk/mitigation log
8. Roles and responsibilities matrix

Methodology:

- Preparation - Prep exercise for the engagement
- Discovery - Stakeholder interviews and workshops, application discovery
- Analysis - Application assessment, migration strategy formulation
- Documentation - Results/Findings
- Executive Readout - Presentation

Engagement Consultants:

Solutions Architects – Application, Infrastructure, Security

Duration:

8-16 weeks
