

Hadoop Migration

We help IT migrate Terabytes to Petabytes of data From on-premise Hadoop to AWS

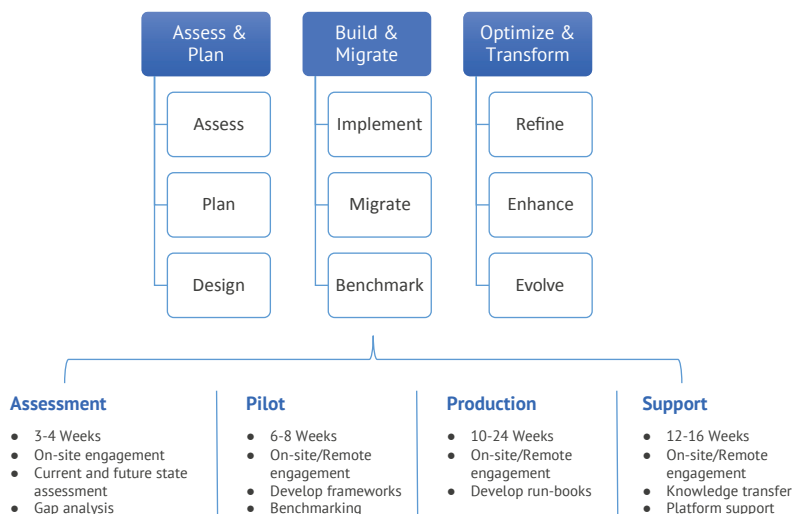

Hadoop Cloud Migration Services

Experience Matters

Cloudwick has more than eight years of experience building, operating, managing and migrating Hadoop clusters to AWS. Our consultants have more than 400 Hadoop and cloud certifications and we work closely with Amazon to migrate production Hadoop clusters on schedule and at budget.

There are three different approaches for big data cloud migration, they are 1) Hadoop lift and shift to dedicated AWS instances, 2) Lift and shift with limited optimization for AWS cloud, and 3) Cloud native refactoring for serverless performance and cost improvement.

Our Hadoop Cloud Migration Methodology

AWS & Hadoop Migration Use Case

Large Global Sports Conglomerate turns to Cloudwick for Hadoop Migration
